

Yamaha XC125 VITY

XC125E

The Vity combines city practicality with economy, taking the strain out of your daily commute. Vity benefits from Yamaha's expertise in 4-stroke single cylinder engine design, and combines performance, refinement and resilience - with a front disc brake that provides assured stopping.

A range of features make longer rides more comfortable, too. While a large seat provides ample room for a passenger, an easily accessible storage compartment in the steering column and underseat storage are great for stowing a helmet and essentials.

With a convenient instrument panel and efficient head and tail lights, you have a scooter that'll make friends on your daily commute.

Features

- A range of features make longer rides more comfortable, too. While a large seat provides ample room for a passenger, an easily accessible storage compartment in the steering column and underseat storage are great for stowing a helmet and essentials.
- The new Vity is equipped with a powerful 153mm diameter front disc brake. Working together with the rear drum brake, it's designed to deliver the smooth and predictable stopping power necessary for a scooter with a powerful and lusty 125cc 4-stroke engine.
- The lightweight and compact 10inch diameter wheels are shod with 100/90- 10 tyres at the front and rear. Combined with a short wheelbase, they make for quick steering, low rider inputs and easy low speed maneuverability. Finished in black, these stylish 3 spoke aluminum wheels add a touch of class.
- A comfortable dual seat can be easily unlocked and lifted up to reveal the spacious storage compartment. The Vity also has additional carrying capacity with a handy luggage rack on the rear.

- The Vity's clearly laid-out instrument panel features an analogue speedometer, a convenient fuel gauge, and a wide array of indicator lights. All vital information is ready to read and in an easy-to-understand layout.
- At just 730 mm high, a sculpted dual seat provides a low and extremely comfortable riding position. It also helps to keep the scooter's centre of gravity low - for great manoeuvrability - and lets you easily put your feet on the ground.
